

Biosensor Specialist

at Varro Life Sciences, Inc.

St. Louis, Missouri

Who We Are

Join us on our mission to bring our breakthrough Micro-Immuno-electrode (MIE) Technology to market for real-time detection of respiratory pathogens, a leading cause of disease transmission. At Varro, we're developing innovative, ultrafast, and cost-effective devices to detect pathogens in breath and indoor air and prevent the transmission of infectious disease. Our devices are designed for ease of use, portability, and seamless integration with other systems for early and accessible disease detection.

Working with Varro is an opportunity to reshape the future of public health through transformative technology.

What We Live By

- **Data-Driven Decisions:** We strive for the best solutions, informed by data and optimized for speed, simplicity, and scalability.
- **Support Each Other:** We celebrate the ideas and contributions of our teammates, recognizing that success is achieved together when everyone feels heard and valued.
- **Simplify:** We create intuitive solutions that lead to clear, meaningful outcomes, enhancing public health and improved patient care.

Key Responsibilities

What You Will Be Doing

The Biosensor Specialist will be a key member of the Varro Life Sciences research and development team. This position will develop and test electrochemical biosensors that detect respiratory pathogens. You will research methods to attach antibodies to the electrode surface, find novel ways to optimize signal-to-noise ratios, and adapt electrodes to new materials and geometries. The Biosensor Specialist will also be responsible for functionalization of electrodes, screening biosensors for specificity, data analysis, and working with manufacturing to ensure biosensor fabrication is within the quality limits needed for deployment. As the Biosensor Specialist, you will be the subject matter expert, driving close alignment with collaborative teams to meet manufacturing and R&D deliverables. Your background and experience need to enable you to design experimental strategies, troubleshoot obstacles in achieving your goals, and work within a multidisciplinary team to ensure that Varro can achieve its objectives.

As part of our team, your core responsibilities will be to:

- Serve as a technical lead collaborating closely with program management both internally and externally supporting the execution of key programmatic deliverables
- Testing biosensor limits of detection and specificity for targets
- Develop and evaluate new electrode designs
- Performing data analysis and statistical analysis

- Develop, validate, and troubleshoot new assays for improved sensitivity, throughput, and reproducibility
- Maintain accurate, detailed laboratory notebooks and electronic data records in compliance with internal and external standards.
- Prepare comprehensive technical reports, presentations, and summaries of experimental findings to inform decision-making within project teams and management.
- Adhere to all laboratory safety, biosafety, and regulatory guidelines.
- Ensure that all experimental procedures and documentation are compliant with company quality standards

What We Are Looking For

Baseline Skills, Experiences, & Attributes:

- Masters degree in Chemistry, Chemical Engineering, Biomedical Engineering, Materials Science, or a related science discipline 5+ years of applicable scientific experience or a bachelors degree with 8+ years of applicable experience
- Experience in electrochemistry or electrophysiology
- Strong analytical and problem-solving abilities with acute attention to detail
- Strong written and verbal communication skills
- Strong, cross-functional laboratory, research and development, “scale-up” skills
- Strong organizational skills
- Experience with Google Workplace and Microsoft Suite

Preferred Qualifications:

- Advanced Degree in a related discipline
- Experience in electrochemical techniques such as voltammetry, amperometry, and impedance spectroscopy
- Hands-on experience with biosensor fabrication, including surface chemistry, functionalization strategies, and packaging for real-world applications.
- Familiarity with microfabrication techniques (photolithography, screen printing, thin-film deposition) is highly desirable.
- Proficiency in data processing and software programming (e.g., R, Python, etc).

Physical Job Requirements:

The physical demands described within the responsibilities section of this job description are representative of those that must be met by an employee to successfully perform the essential functions of this job. Reasonable accommodations will be made to enable individuals with disabilities to perform the essential functions.

- Must be able and willing to lift 40 lbs
- This position is required to work onsite at our office location in St. Louis, MO

Location and Compensation

This is an onsite, full-time position located in St. Louis, MO.

Anticipated Salary Range: \$60,000-80,000 annually. The base salary range represents the anticipated low and high end of the salary range for this position. Actual salaries will vary and may be above or below the range based on various factors including but not limited to work location, operational needs, potential employee qualifications and other considerations permitted by law. The range listed is just one component of our total compensation package for employees. Other rewards may include annual bonuses, equity and program-specific awards.

In addition, we provide a variety of other benefits to employees including but not limited to:

- Medical, dental, and vision coverage.
- 401(k) plan
- Annual bonuses, equity options, and other awards

You will have the opportunity to build revolutionary products that can save millions of lives!

VARRO does not accept agency resumes.

VARRO Life Sciences is an E-Verify and equal opportunity employer regardless of race, color, ancestry, religion, gender, national origin, sexual orientation, age, citizenship, marital status, disability or Veteran status. All your information will be kept confidential according to EEO guidelines.
